

A few minutes about | **HI-ART®**  
High Abrasion Resistent Textile

**JOFAMA**   **LINDSTRANDS**   *Halvarssons*

Hi-Art is the name of a "terry loop" textile, developed by Jofama.

The principle is that abrasion takes place against the short ends of the fibres, as apposed to a flat structure. The structure itself is also thicker, which takes more time to wear through.

The material is pliable and can be used behind stretch panels as extra protection against abrasion.

The material is available in two versions:

Hi-Art Light, a thinner version, suitable for lighter clothing.

Hi-Art "medium" used in Jeans.

JOFAMA

LINDSTRANDS

Halvarssons

Hi-Art material is used in area's of garments which are more exposed to abrasion in case of a fall, like shoulders, elbows, hips/seat and knees.

Hi-Art can also be found in the palm area of our gloves.

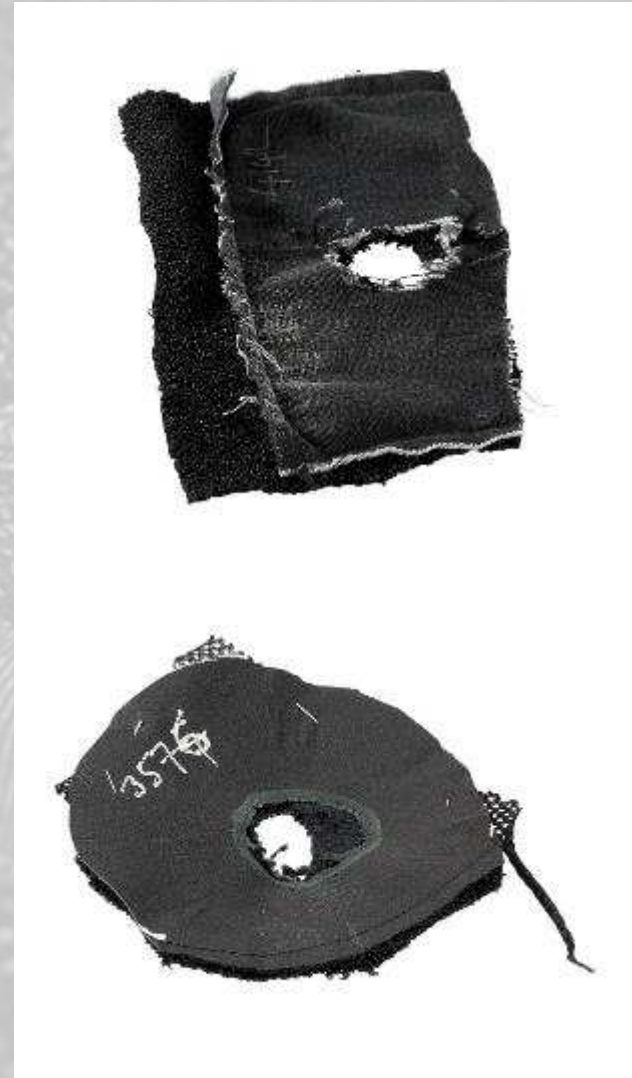

JOFAMA

LINDSTRANDS

Halvarssons

Hi-Art Light improves abrasion resistance by 520% when combined with textile materials as apposed to textile alone.

Hi-Art Light improves abrasion resistance by 230% when combined with leather as apposed to leather alone.
